PROFESSIONAL SUMMARY

AI Automation Engineer with hands-on experience designing and deploying multi-agent AI systems, end-to-end workflow automation pipelines, and full-stack applications. Skilled at connecting LLMs, APIs, webhooks, and containerized services (Docker, n8n) into resilient automated systems. Passionate about eliminating manual bottlenecks, building agentic architectures, and shipping production-grade automation solutions.

CORE SKILLS

AI & Agents: Multi-Agent Systems, LLM Orchestration, RAG, Prompt Engineering, Groq API, Anthropic API, Ollama, LangChain

Automation & Workflow: n8n, Webhooks, Event-Driven Architecture, Zapier, API Integration, Cron Jobs

Languages: Python, JavaScript, SQL, HTML/CSS

Backend & APIs: FastAPI, Flask, REST APIs, WebSockets, Pydantic, SQLite, PostgreSQL

Frontend: React 18, Vite, Tailwind CSS, Framer Motion, ReactFlow

DevOps & Containers: Docker, Docker Compose, GitHub Actions CI/CD, Render, Vercel

Security: Burp Suite, Nmap, DirBuster, OWASP Top 10, Manual Pentesting, RSA/DES

Data & ML: PyTorch, Scikit-Learn, Pandas, NumPy, OpenCV

Digital Marketing: SEO (On-page, Technical, AI SEO), Google Ads, Meta Ads, Email Campaigns & Automation, CRO & A/B Testing, Shopify Store Setup, Analytics

PROJECT EXPERIENCE

NEXUS Research — Multi-Agent AI Research Workspace — Python · FastAPI · React · Groq · WebSockets · Docker

- Designed and built a 4-agent AI pipeline (SCOUT → ANALYST → CRITIC → SCRIBE) that transforms a single research question into a structured executive brief, fully automated end-to-end.
- Engineered SCOUT to expand a user query into 3–12 targeted DuckDuckGo search queries, scraping and deduplicating sources using httpx and BeautifulSoup4.
- Built a token-optimized LLM routing layer: cheap llama-3.1-8b-instant for planning, llama-3.3-70b-versatile for reasoning — keeping a full 4-agent run under a 12k token budget on Groq free tier.
- Implemented a semantic prompt cache (hash-keyed on prompt + model + schema) so repeated calls cost zero tokens; added graceful per-run token budget guardrails and JSON retry logic.
- Streamed all agent events (running / searching / reading / complete) over native FastAPI WebSockets to a live React 19 dashboard with an animated ReactFlow agent topology graph and real-time event feed.
- Added one-click native text PDF export (jsPDF) — selectable, searchable, and branded — with zero screenshot dependency.
- Shipped 28 Pytest and Vitest tests in GitHub Actions CI; deployed backend on Render and frontend on Vercel.

GEARFLOW — Full-Stack Business Automation System — n8n · Docker · FastAPI · PostgreSQL · WhatsApp API · Webhooks

- Architected and implemented end-to-end automation for a multi-city bike service company spanning lead intake, order dispatch, fraud detection, mechanic payouts, and executive reporting.
- Built the intake pipeline in n8n: Facebook/Instagram ad leads hit a webhook → OTP verification via WhatsApp API → Google Maps geocoding validation → auto-dispatch to the nearest available mechanic using GPS proximity logic, all without manual intervention.
- Deployed n8n as a self-hosted Docker container with a PostgreSQL backend, enabling persistent workflow state, audit logs, and zero-downtime restarts across city operations.
- Implemented a Watchdog automation agent: background n8n workflows silently monitor mechanic GPS spoofing, job-time anomalies, and back-to-back cancellations — auto-suspending flagged accounts and raising high-priority dashboard tickets.

- Designed a digital wallet system: mechanic commission is auto-deducted the moment a customer OTP closes the order; wallet balance gates new order eligibility — eliminating manual cash reconciliation entirely.
- Built an AI-powered customer support bot (RAG over company SOPs + live DB) that handles 80% of inbound queries autonomously; sentiment analysis escalates frustrated customers to human agents with urgency flags.
- Automated HR onboarding (contract e-sign, app provisioning, WhatsApp training sequences), leave approval workflows, and monthly payroll CSV generation — all triggered from a single n8n workflow.

Digital Marketing & AI-Driven Growth — Freelance / Practice Projects — SEO · Google Ads · Meta Ads · Shopify · AI Automation

- SEO Optimization & Content Strategy: Performed keyword research, optimized meta tags, headers, and internal linking; created AI-assisted SEO content and improved readability and search intent alignment.
- Paid Ads Campaign Simulation: Built structured Google Ads & Meta campaigns, defined audience targeting, created ad copies, and analyzed CTR, CPC, and conversion metrics to optimize spend.
- Email Marketing & Automation: Designed lifecycle flows (welcome, abandoned cart), segmented user lists, and wrote high-converting email content with automation triggers.
- Shopify Store & CRO: Developed a demo store, optimized product pages, improved CTAs, and applied funnel optimization techniques to maximize conversion rates.
- AI Workflow Automation: Leveraged AI tools (ChatGPT, automation platforms) for content generation, ad copy, and reporting — significantly reducing manual marketing overhead.

WORK EXPERIENCE

Cybersecurity & Ethical Hacking Intern | Edureka Nov 2022 – Nov 2023

- Performed manual penetration testing on vulnerable web applications; identified and exploited 48 vulnerabilities across the OWASP Top 10.
- Used Burp Suite, Nmap, and Turbo Intruder to carry out SQL injection, DOM-based XSS, and null-byte bypass attacks.
- Wrote detailed vulnerability reports walking developers through each exploit and a concrete remediation path.

EDUCATION

MCA: IGNOU | Jun 2023 – Sep 2025 | CGPA: 7.5 | Data Communication & Networks, Cloud & IoT, Advanced Software Engineering

B.Sc. Physics, Mathematics & CS: Bangalore City University | 2019 – 2022 | CGPA: 8.0

CERTIFICATIONS

- Google OPAL — Hands-On AI Automation & Agent Workflows | Tayana Academy
- AI Workshop — Be10X (Feb 2026)
- Python Scripting & Data Visualization — NumPy, Pandas, Scikit-Learn, Matplotlib
- Penetration Testing & Cybersecurity — CFSS (Sep – Nov 2023); hands-on via HackTheBox and PicoCTF
